Continuation of Substance of Interview including description of the general nature of what was discussed: The examiner discussed with applicant's representative that correlating the rate of temperature increase or decrease or change with respect to the air-fuel ratio has not been taught by the prior art. The preamble recites that the catalyst degradation is determined. The examiner indicated that the step of actually determining whether the catalyst is degraded in the method and the apparatus is required for 112, 2nd paragraph reasons. The examiner and applicant's representative discussed proposed language and amendments to the claims which was authorized by examiner's amendment on June 4, 2008..
